

VIDU  
· Conscious dentistry ·

# CONSCIOUS DENTISTRY.

Reduce the plastic generated in your clinic.

## WHY DOES VIDU EXIST?

In 2020, detecting the need and demand of dental clinics for more environmentally friendly solutions and materials, VIDU was born. A new brand of products for dental clinics and laboratories that aims to offer, in the dentistry sector, more sustainable products, with more coherent manufacturing/transportation that allow responsible and environmentally friendly consumption.

VIDU's mission is to offer dentists, dental clinics and laboratories high quality products, in a simple, easy, transparent way and at the best possible price. Finally a solution to enjoy more conscious dentistry committed to caring for our planet.

## OUR 6 PRINCIPLES:

### 1. SUSTAINABLE DESIGN

Ensuring the highest quality conditions and getting a fair price, we always seek to offer the least polluting and most easily recyclable solution possible (both in terms of product and packaging).

### 2. RESPONSIBLE CONSUMPTION

VIDU promotes the responsible consumption of its products with a very practical packaging format and encouraging dental clinics not to consume more than necessary.

### 3. PLASTIC NEUTRAL.

We use as little plastic as possible in our products and packaging and, moreover, every month we collect the same amount of plastic that we generate thanks to our collaboration with rePurpose.

### 4. WASTE REDUCTION

VIDU does not use more packaging in its products than is essential and, in addition, the instructions for its proper recycling and disposal can be found clearly on the product data sheets.

### 5. ONLINE DISTRIBUTION

The marketing of these products is carried out primarily through the Internet, thus avoiding unnecessary transportation and contamination.

### 6. EASY RECYCLING

In addition, instructions for proper recycling and disposal will be clearly found on the product sheets.

# PLASTIC NEUTRAL

13.266 kg. generated = 13.266 kg. collected

## VIDU offsets its footprint by collecting the same amount of plastic that generates.

VIDU is the first brand in the dental sector to offer clinics a Plastic Neutral Certified alternative, that is, dental products with a plastic footprint = zero. We use as little plastic as possible in our products and packaging, and each month we collect the same amount of plastic that we generate thanks to our collaboration with rePurpose, the leading international organization for action against plastic.

**13.266KG GENERATED = 13.266KG COLLECTED**

\*From the start of VIDU in May 2021 until December 2023, 8.680 kg. collected and certified by Gravity Wave. \*Since January 2024, 4.586 kg. collected and certified by rePurpose.

## Is it possible to use fewer plastic products and packaging in the dental sector?

In some products it is possible and VIDU works to always offer the most responsible solution. But in many of the products used in dental clinics, for hygienic and health reasons, we cannot give up the use of plastic. Furthermore, they are not easily recyclable as they are considered contaminated material due to potential biological risk.

## How and where do we collect this plastic?

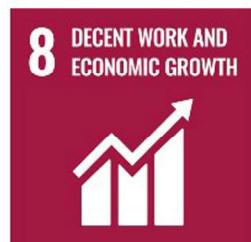

RePurpose has developed the largest certified network of plastic collection projects around the world, providing environmental, social and economic benefits in the areas worked.

VIDU collaborates directly with the project Nuevo Ciclo, in Colombia working with local communities to collect low-quality plastic worth. People from schools and other institutions are trained to manage plastic collection centers. rePurpose Global funding covers the cost of collecting, transporting, sorting and recycling soft and low-value plastics into plastic lumber, which is used to make furniture and services that are donated for use in schools, as well as for build houses for vulnerable populations in the local area.

### Main Impact KPIs of the New Cycle Project:

- 30,000kgs. of plastic collected (equivalent to 600,000 plastic bags)
- 36 collector workers on staff.
- Plastic type: MLP.
- Type of collection: urban

### Working towards the Sustainable Development Goals (SDGs) United Nations:

# PLASTIC FOOTPRINT

## What is the plastic footprint of VIDU products?

All VIDU products have the "Plastic Neutral · Certified" seal and offset your plastic footprint. But exactly how much plastic are we talking about?

In all the descriptions of VIDU products in Dentaltix, the weight in grams of plastic that has been used for each unit always appears (both in the packaging and the product itself), in order to know its footprint and how it is compensated. These are some examples with greater impact:

### **MICRO-APPLICATORS = 90gr.**

Weight of plastic used = 90gr./unit  
Weight of collected plastic = 90gr./unit

Location: Nuevo Ciclo Project in Medellín, Colombia.

### **STERILIZATION BAGS = 100gr.**

Recyclable. Uncontaminated material.  
Weight of plastic used = 100gr./unit

Weight of collected plastic = 100gr./unit  
Location: Nuevo Ciclo Project in Medellín, Colombia.

### **BIB NAPKINS = 45gr.**

Weight of plastic used = 45gr./unit  
Weight of collected plastic = 45gr./unit

Location: Nuevo Ciclo Project in Medellín, Colombia.

### **MICROHYBRID COMPOSITE = 10gr.**

Weight of plastic used = 10gr./unit  
Weight of collected plastic = 10gr./unit

Location: Nuevo Ciclo Project in Medellín, Colombia.

### **UNIVERSAL ADHESIVE = 10gr.**

Weight of plastic used = 10gr./unit  
Weight of collected plastic = 10gr./unit

Location: Nuevo Ciclo Project in Medellín, Colombia.

### **OTHER EXAMPLES:**

Bib napkins, alginate, retractor thread...

Composites, etching gel, cements...

Fiberglass posts, post cutters...

And more VIDU products on the way!

## Why does VIDU work with some plastic products?

Although at VIDU we offset the footprint of all the plastic we generate (through RePurpose), we still continue to manufacture plastic products. Why do we do it?

Single-use plastic continues to be one of the most consumed materials in the dental sector and unfortunately, at the moment it is not easy to achieve the same hygienic and sanitary conditions with other biodegradable or more easily recyclable materials.

Faced with the dilemma of whether or not we should produce some products commonly used in dental clinics made of plastic, we have decided to do so. We know that clinics need these disposable plastic products to do their jobs, and if VIDU does not manufacture them, they will use other non-"Plastic Neutral" alternatives that they will find on the market.

As we work to research and design more environmentally friendly alternatives, we will continue to offset the plastic footprint of these products (by collecting the same amount of plastic that these products generate). We believe this is a more sustainable option than not offering any solution to these products.

# IMPACT

## Classification of products and their packaging based on environmental impact:

Impact factors considered (both for the product, its final packaging unit and its transport packaging unit):

- Manufacturing material and environmental footprint generated in the process.
- Usability and durability,
- Possibility of recycling and level of difficulty.

### 1. Plastic products > single-use, non-recyclable.

Our headache! Micro-applicators, fluoride trays, rubber dams... Unfortunately, the recycling of these products is not recommended due to the potential for biological risk if they have been in the mouth. Therefore, currently, while we work on the development of alternatives in other biodegradable materials, we only have the footprint offset thanks to the Plastic Neutral collaboration with RePurpose. In all product sheets you will find the weight of plastic generated that we compensate.

### 2. Plastic products > single use, recyclable

Sterilization rolls and bags, recyclable packaging... better! There is no biological risk here, therefore, by separating paper from plastic, recycling these materials is very simple. On the package we remind users of recycling and responsible consumption guidelines.

### 3. Plastic products > reusable/sterilizable

Cheek retractors, impression trays, orthodontic boxes. Unlike other brands, the quality of the material of these products allows them to be reused and sterilized, thus avoiding single-use consumption.

### 4. Alternative Material Products

Paper cups to replace plastic ones at a competitive price (Finally!) Brackets and orthodontic arches in recycled cardboard boxes instead of plastic (The only brand on the market to do so!). Dental wedges made of maple wood, fiber posts in cardboard boxes... And other products that we are currently developing through research into new materials and alternative designs.

# OUR PRODUCTS

Plastic Neutral Certified.

## INDEX

### 1. DENTAL RESTORATION 07 - 16

Microhybrid composite, nanohybrid composite, adhesives, cements, dental seals, etching acid, wedges, dental posts, restoration accessories...

### 2. ORTHODONTIC MATERIALS 17 - 35

Kits of brackets, archwires, ligatures, chains, intraoral elastics, crimpable hooks, tubes, lingual buttons, orthodontic boxes, facial masks...

### 3. ENDODONTIC MATERIALS 36 - 45

Endodontic files, gutta-percha points, paper points, endoactivators and chelating agents, endodontic accessories...

### 4. DENTAL INSTRUMENTS 45 - 81

Exploration and diagnosis packs, tweezers, curettes, forceps, handles, mouth openers, probes, intraoral mirrors, surgical curettes, explorers, scissors, spatulas, lip retractors, photography mirrors...

### 5. DENTAL IMPRESSION 81 - 90

All the necessary material for bite registration: Chromatic alginates, silicones, mixing tips, plasters, intraoral tips, impression trays...

### 6. DISPOSABLE MATERIALS 90 - 101

Bib napkins, sterilization rolls and bags, ejectors, ecological cups, ice bags, rubber dams, cotton rolls, masks... recyclable and Plastic Neutral certified.

### 7. PROPHYLAXIS 101 - 103

Prophylactic paste, polishing brushes and fluoride trays.

### 8. DENTAL WHITENING 104

Thermoforming plates for teeth whitening with Plastic Neutral certification.

### 9. NEEDLES AND SYRINGES 103

Single-use needles for anesthesia application with Plastic Neutral certification and stainless steel syringes.

### 10. DESINFECTION AND CLEANING 105-107

Surface disinfection material and disinfection of dental instruments. Packaging with Plastic Neutral certification.

### 11. DENTAL LABORATORY 107-108

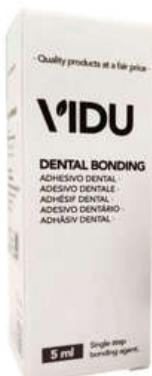

Knives and spatulas for plaster and wax.

- Light-curing resin-modified **calcium hydroxide** pulp cap/liner.
- Time-saving **direct application** and light-curing.
- **Remineralising** and strengthening **effect** on tissues.

Variation / SKU

VI93200

- Improves adhesion to dentine and enamel in both wet and dry environments.
- **Photo-polymerisable**.
- Compatible with any sealing material.
- **Made in Germany**.

Variation / SKU

VI91001

## Self-Etching Dental Adhesive (5 ml)

## Restorative materials

- **One-component, self-etching, light-curing** adhesive.
- Composite restorations on **enamel and dentine**.
- It **saves time**, as the application is done in one step, **without pre-etching**.
- Made in Germany.

Variation / SKU

5 MI - VI91003

## Glass Ionomer Cavity Bottom (2 x 2 ml)

## Restorative materials

- Visible by **X-ray**.
- Suitable for blocking undercuts.
- Polymerised in **30 seconds**.
- **Made in Germany**

Variation / SKU

VI93140

- **Quick setting.**
- -Aesthetic
- With excellent **thermal expansion and translucency.**
- High **resistance** to wear and erosion.

## Variation / SKU

A2 - VI93122  
A3 - VI93123

- **High adhesion** to dentin, enamel and non-precious alloys ensuring excellent.
- Exact marginal sealing
- Low film thickness.
- Excellent biocompatibility

## Variation / SKU

VI93112

- **Hydrofluoric acid** gel for porcelain surfaces.
- **60 seconds** engraving time.

Variation / SKU

VI91020

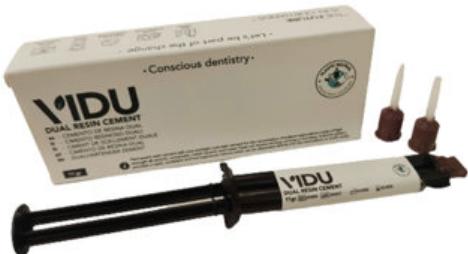

- Dentine and enamel etching gel.
- Engraving time: 15 - 20 seconds.
- **Thixotropic**.
- Compatible with any sealing material.
- **Made in Germany**.

Variation / SKU

1 Syringe Of 50 MI - VI91015  
 2 Syringes Of 3 MI - VI91013

- Universal Tone.
- Contains **11 gr.**
- Excellent adhesion values.

Variation / SKU

VI93500

- Light-curing **low viscosity**.
- Sealant for occlusal surfaces as a prophylactic against caries.
- Contains and releases fluoride.

Variation / SKU

VI93400

- **Very rough and retentive surface.**
- **Maximise adhesion with cement.**
- Translucent to accelerate the activation of dual cements.
- **Radiopaque and with high bending strength.**
- Content: 5 posts of 4 different sizes + milling cutter.

Variation / SKU

VI95000

- Surface **very rough and retentive.**
- **Maximize adhesion with cement.**
- Translucent to accelerate the activation of dual cements.
- **Radiopaque and with high flexural strength.**
- Available in different sizes.

Variation / SKU

1.0mm - VI95002  
 1.2 mm - VI95003  
 1.4 mm - VI95004  
 1.6 mm - VI95005

- Made of **stainless steel monobloc (reamer)**.
- Specific for **enlarging the root canal with the same taper as the post**.
- Colour coded with the corresponding post.
- **Individually packaged** in small containers with labels.

## Variation / SKU

1.0mm - VI95007  
 1.2 mm - VI95008  
 1.4 mm - VI95009  
 1.6 mm - VI95010

- It offers an **extraordinary polish**.
- Indicated for **Class III, IV and V restorations and Class I and II cavity floor**.
- High **radiopacity and excellent biocompatibility**.
- **Made in Germany**.

## Variation / SKU

1 MI Syr. - A1 - VI92101  
 1 MI Syr. - A2 - VI92102  
 1 MI Syr. - A3 - VI92103  
 1 MI Syr. - A3.5 - VI92104

- **Self-etching**, no mixing required.
- High abrasion resistance and excellent marginal sealing.
- **Easy to remove**, does not contain eugenol.
- **Made in Germany**.

Variation / SKU

VI93001

- **Plastic Neutral**. Plastic footprint = 0gr. .
- Contains **calcium hydroxide** and **hydroxyapatite**.
- Its consistency is **elastic** and it is **easy** to remove.
- Designed for crowns and bridges on live or pulpless teeth.
- **Made in Germany**.

Variation / SKU

1 Pc - VI93300

- **Simple, non-sticky application** with filling instrument.
- Excellent **retention** and easy to use.
- Easily packable.
- **Medium hardness** after setting.
- **Self-healing** under the action of saliva.

Variation / SKU

VI93002

- Composite with **high aesthetic qualities of opalescence and fluorescence**, resembling natural teeth.
- Light-curing microhybrid resin with nano particles, ideal for direct restorations.
- Available in **12 shades** which makes it highly aesthetic.
- High hardness and abrasion resistance, inorganic filler 76%.

VI62363

- It is used to hold instruments for rubber dams.
- U-shaped.
- Available in **small or large**.
- **Content:** 1 unit.

## Variation / SKU

Large - VI62114  
Small - VI62113

- Easy to place in the mouth and on models after hardening.
- Easy and safe processing thanks to the 1:1 double cartridge system.
- Can be scanned with optical/laser/tactile scanning systems.
- Maximum control during installation.

## Variation / SKU

2 X 50ML + 12 Tips - VI52060

- With **chromatic indicator** for ease of use and work: red - orange - yellow.
- Fast-setting: 30 seconds.
- Maintains high dimensional stability over time (**up to 168 hours**).
- Dust-free and **easy to remove**.
- Contents:** 450 gram bag.

## Variation / SKU

24 Units - VI51003-24  
450 Gr - VI51003

- With **chromatic indicator**: purple - lilac - yellow.
- Extra-rapid**setting** 30 seconds.

## Variation / SKU

450 Gr - VI51004

- With **chromatic indicator**: purple - lilac - yellow.
- Extra-rapid **setting** 30 seconds.

Variation / SKU

18 Gr - VI51004-1

- Very high accuracy** in detail detection.
- Wear **resistance**.
- Low expansion.
- Fast setting time.
- Compatible with all printing materials and insulating liquids.
- It leaves no residue on the workpiece.

Variation / SKU

VI56003

## Orthodontic Stone Type III (6 kg)

## Impression materials

- Characterised by **high hardness, extra fine particle size, low expansion and fast setting**.
- Used in the **processing with acrylic resins**, both in hot and cold polymerisation, because it keeps the surface unaltered, avoiding distortions and/or breakages of the model.
- It is **compatible with all impression materials** (alginates, silicones) and insulating liquids, and leaves no residue on the part.
- **Bright white**.

Variation / SKU

VI56001

## Type IV plaster (6 kg)

## Impression materials

- Extra hard plaster specific for total, partial and skeletal prosthesis models and for implant and antagonist prostheses.
- Its **final hardness, low expansion, compact and detailed final surfaces** guarantee the production of very precise prosthetic parts.
- Compatible with all **impression materials (alginates, silicones) and insulating liquids**, and leaves no residue on the part.
- **Colour: pink**.

Variation / SKU

VI56005

- **High hydrophilicity.**
- It adapts perfectly to the anatomical shape of dental structures and soft tissues.
- **Permanent dimensional stability.**
- Available in Normal Set and Fast Set.

## Variation / SKU

2 X 50 MI - D: Light - F: Fast + 12 Tips - VI52014
